PROFESSIONAL SUMMARY

I am a proactive and results-driven engineer, with a strong passion for leadership, teamwork, and continuous growth. Through executive roles and technical projects, I have developed the ability to coordinate teams, communicate effectively, and drive initiative to completion. With a solid foundation in Electrical and Electronic Engineering and hands-on experience in control system and automation at Yokogawa Nigeria Limited, I bring strong analytical and system-thinking skills to problem-solving. I am building my career as a full stack software Engineer, with experiences developing responsive application using HTML, CSS, JAVASCRIPT, VUE.JS and REACT.JS frame-work, alongside foundational knowledge in Python, C language and shell scripting. I am committed to leveraging engineering principles and modern software development to deliver innovative and impactful solutions.

KEY SKILLS

- Front-End Technologies: HTML5, CSS3, JavaScript (ES6+), jQuery
- Frameworks & Libraries: Vue.js, React.js
- Programming Languages: Python (scripting and automation), C (algorithmic fundamentals), Shell (basic scripting)
- Tools & Practices: Git/GitHub for version control, Responsive Web Design, Agile Methodologies
- Soft Skills: Analytical Problem-solving, Team Collaboration, Adaptability to Fast Paced Settings

PROFESSIONAL EXPERIENCE

Electrical Engineer (Volunteering)

Bartum Energy

February 2026 - present

I am currently volunteering as an engineer on a solar power installation project at the banquet hall beside Governor's house Bayelsa state.

- I support the design installation, and supervision of photovoltaic (pv) system and ensuring proper panel placement.
- I support the inverter configuration and safe electrical connection.
- Work closely with senior engineers and technicians to maintain high technical standard, comply with safety regulation, and optimize system performance.

Control Systems Specialist (Internship)

Yokogawa Nigeria Limited, Lagos

November 2024 - April 2025

- Configured and programmed Distributed Control Systems (DCS) using Yokogawa's Centum VP platform, implementing control logic that enhanced process automation for industrial clients and reduced system response times by 15%.
- Conducted testing, troubleshooting, and maintenance of control equipment, identifying and resolving issues that minimized operational downtime by 20% during simulated and live environments.
- Collaborated with engineering teams to develop and simulate control strategies, contributing to project documentation and ensuring compliance with industry standards for safety and efficiency.
- Assisted in the integration of software modules with hardware interfaces, bridging electrical engineering principles with programming practices to support scalable industrial solutions.

Production and Delivery Operator

Indomie Foods Group, Lagos

July 2015 - March 2020

- Managed end-to-end production cycles, implementing quality assurance protocols that decreased product defects by 15% and ensured compliance with industry standards.
- Coordinated logistics and delivery operations for daily shipments, improving route efficiency and achieving a 25% reduction in delivery delays through data-driven planning.
- Trained and mentored junior staff on operational procedures, boosting overall team productivity by 10% and contributing to a safer, more reliable work environment.

PROJECTS

J.P TECH Web Project (<https://github.com/uzojohn/J.PTECH>)

- Developed an introductory web application using HTML, laying the groundwork for frontend development skills and demonstrating basic structure for potential full-stack expansions.

ALX Pre-Course Repository (https://github.com/uzojohn/alxpre_course)

- Created as part of the ALX Software Engineering onboarding, incorporating Shell scripting to explore full-stack engineering concepts, serving as a foundational step in professional coding practices.

ALX Zero Day Repository (https://github.com/uzojohn/alxzero_day)

- Initialized a repository focused on entry-level full-stack development, utilizing Shell for basic automation tasks and building initial proficiency in version control with Git.

EDUCATION

B.Sc. in Electrical and Electronic Engineering

Niger Delta University, Bayelsa State

July 2020 - July 2025 (*Graduated*)

-Relevant Coursework: Circuit Design, Programming Fundamentals, Digital Systems - bridging hardware knowledge with software applications.

- Final year project: MATLAB SIMULATION ON SMART GRID CONTROL SYSTEM FOR POWER DISTRIBUTION.

West African Examination Council (WAEC)

Irvington College,

Lagos

September 2016 - June 2018

CERTIFICATIONS & TRAINING

ALX Software Engineering Program

-Completed intensive training in software development, earning a professional certificate. Focused on building scalable applications, version control, and collaborative coding practices.

Udemy Web Development Bootcamp

-Mastered frontend technologies through hands-on projects, emphasizing modern web standards and user interface design.

PROFESSIONAL MEMBERSHIP & LEADERSHIP

- Nigerian Institute of Electrical and Electronic Engineers (NIEEE) – Student Member
- Institute of Engineering Technology (IET) – Student Member
- PRO, NIEEE Student Chapter, Niger Delta University – 2023
- Vice President, NIEEE Student Chapter, Niger Delta University – 2024
- Vice President, NIEEE Student Chapter, Niger Delta University – 2025

VOLUNTEER EXPERIENCE

Event Volunteer

Bayelsa Expo, Bayelsa State

- Coordinated setup and guest services for a largescale event, managing logistics for 300+ attendees and ensuring smooth operations through effective teamwork and quick problem resolution.
- Contributed to community engagement initiatives, enhancing organizational skills transferable to agile software development teams.
